

Deh-P7800Mp Manual

iPod
Compatible con iPod común, mini o nano. Adicionando un adaptador Pioneer de iPod se puede controlar este reproductor con casi todas las funciones incluidas las botiguetas y ver los títulos y demás en el display del equipo.

Audio
A diferencia de los modelos inferiores el 7800 incorpora un DAC Burr Brown de 24 bits para una mejor calidad de sonido pero no es posible apagar el amplificador interno como si se puede en el 880. Posee 3 pares de RCA (Front, Rear, Sub) de 5 volt (100 ohm).
Tiene un ecualizador gráfico de 16 bandas, hubiera preferido que tenga un paramétrico.

También tiene bte, comptrim, loudness, sra (ajusta el volumen de cd, radio, etc por separado), y agrega el ALC para ajustar el volumen de los sonidos que emite el stereo de 0 a 12. Esto ultimo es simplicit al principio pero despues pasa a ser un tanto molesto y se termina bajando el volumen a 0 o 1 como mucho ya que la diferencia en la escala de 2 a 12 es casi inapreciable y todos los sonidos parecen sonar fuerte.

Tiene ajuste de volumen automatico segun la aceleración del vehículo (si vas rápido el volumen se sube un poco), pero no es posible ajustar el nivel de sensibilidad como en otros modelos.

En cuanto al DSP incorpora la alineación de tiempo, muy completa y útil. Permite ajustar el delay de cada parlante indicándole la distancia (en metros o pulgadas) a la que se está escuchando desde 0 hasta 4 metros en pasos de 1.25 centímetros. También se puede indicar la cantidad de personas y donde están sentadas. Si se desea se puede usar alguno de los presets (por tamaño de vehículo) incorporados.

Otras funciones son: tres crossovers: delaterra, basero y sub, todos con frecuencia, dB/Oct y nivel. Los dos primeros agregan la posibilidad de hacer un bypass o de anular la salida, por Ej si se quieren apagar los parlantes traseros. Esta función me resultó de mucha utilidad para anular los dos 4" originales traseros cuando no va nadie en el asiento de atrás.
