The difference is that it stores information and does not have any ability to prevent new information being stored in it or removed. These images are carefully set codes that tell the vehicle how to operate. So why would someone want to reprogram their ECU Flashing or reflashing your ECU can unlock abilities in your vehicle that are limited by the manufacturer. Like any computer, the ECU has software with different settings, and these can be changed to alter the performance of a vehicle. However, it will void your car's warranty, so only do this if you own the vehicle. If you are making car payments, here are some great tips for paying off your loan early ! This is very helpful for catching problems early on and keeping your car healthy. Proper maintenance and consistent diligence can keep your car running forever. Your car has to be flashable in order for this to work. What does "flashable" mean. Well, any cars that use a ROMbased ECU are flashable. Shop here if you are looking for a used car to tune up. So how do we flash a car computer This is a free program that will give you access to the information stored in your car's computer. This includes the ability to flash a new image onto the computer. Check out a guide to the most common locations. Be sure that you have the right ones by searching for your make and model. Search through the folder and choose the new image you wish to flash to your car's ECU. Make sure your car's ignition is set in the accessory position. Click "OK" and the image will be uploaded to your computer. EcuFlash is easy to use and it will help you find the right images for the function you want to use. Otherwise, the problem will continue to get worse without a reminder to take care of it. Note This code helps your engine run at optimal levels, so do this with caution. If you alter the engine's performance at all, take a test drive in an empty parking lot to get used to the way it runs before hitting the main roads.

However, be smart, and be safe. Just remember that you should never do this on a car you are leasing or trading in, as it can be rejected. Then, you will definitely love American muscle cars. Coined in 1949 due to the demand for a fast car, muscle cars have become one of America's most loved cars. The 1960s and 1970s saw the creation of some of the best muscle cars of all time. If you are looking for a muscle car, read on as we look into some of the best muscle cars. The Mustangs have undergone a series of transformation from the first to the fifth generation. There is more to this car that will make you want to own it. It was based on an F-body platform and offered no less than three six-cylinder engines and four V8s. A longer and wider Camaro was then introduced in 1970. The fifth generation Camaro was later introduced in 2010 with a better body and an even better performing engine. Several other challengers were later introduced over the years but the oil crisis crippled the sales of the muscle cars and this led to the early retirement of this car in 1974. In 2008 the challenger made its way back and this 3rd generation challenger has soldiered on and so far has had a number of stylistic updates. It is very fast and has a 797 horsepower supercharged V8 engine. It featured four-wheel disc brakes, optional side exhaust pipes, a big block, and a 6.5 liter V8. This muscle car has gotten even better with time and the C6 generation that was produced from 2005-2013 and has better handling and is a much-loved sports car. Get ready to experience this legendary ZR1 supercar with a 755 horsepower and a top speed of 212 MPH. If you want a luxurious muscle car, the Dodge Viper will be an ideal choice. This car has been in the market for 25 years and it is one of the best classics. It also borrowed a little bit from the Ferrari.

This muscle car was an instant hit and GM improved its performance over the years. However, in 1974, its sales went down forcing its production to stop. Though you will not be able to find a new Pontiac because 2006 was the last year it was produced you can still buy it from its original owners. In 1967, the second generation Plymouth was introduced and it had responded to the need of the market. The model was much more aggressive with a V8 motor and better handling. It had three V8 engines and was on its way to muscle car success. These cars have both high and low performing options but if you want to feel the real American muscle cars, then the high performing option is your ideal choice. Subscribe to our newsletters. The demand for In this article, you'll discover the story behind the most famous Japanese car brands from Honda to Toyota. Let's go! From the Accord to Fit and CRV to CRZ, Honda has built a reputation of world-renowned cars. Honda established the company in 1948 in a wooden shack to the multinational player it is today. Just when you think Honda can no longer make any improvements on the latest model, they exceed expectations once again. However, it wasn't until the after the Second World War that the company started to put its efforts into the manufacturing of cars. Nissan continues to show ambition with the plans for driverless cars by the year 2020. Popular Mitsubishi cars include the Lancer Evolution, RVR, and the Colt. However, the company has experienced a decline in sales in the past couple of years. Mazda vehicles scream trendy and innovation. Whether it's the Mazda MPV or the Roadster, these are fabulous cars. Even though Mazda has not had much financial luck of late, it remains the 15th biggest manufacturer of vehicles in the world. In particular, the models Outback and Crosstrek have proven to be big sellers for the company. It the small and light design makes it ideal for transporting the vehicle overseas with this company.

The car manufacturer has achieved sales of more than three million vehicles; however, it has experienced a dip in sales lately. It speaks to those of us who admire the luxury car experience and the elegance and dynamism of driving. But also, you have to have the cash too! The Toyota company is so huge that it's even the 6th largest company in the world. Furthermore, the company also boasts some of the most innovative hybrid vehicle technology. Toyota has become the leader of hybrid electric vehicles. But, it doesn't seem to be slowing down at all. There are also signs that the Japanese manufacturers are set to lead the way into the driverless future. Do you want to discover the auto repair manual for your Japanese vehicle But, there's no reason to get the entire thing

reupholstered. Click here to learn how to repair leather car seats. And, that goes for fabric seats, too. Instead, you might be surprised by how easy it is to do it on your own. In most cases, the manufacturer of your car will sell a specific repair kit designed to match your interiors. This means that the color of the leather repair materials will most closely match the leather itself. Let things dry completely — at least a tenminute wait — before moving on. Especially if it's an older tear, it's likely that the leather material will have started to crinkle upwards, and that bare threads will be exposed. Now, slowly and gently put the backing cloth in the tear, pushing your cloth up underneath the hole. Use a butter or palette knife and put the filler on the cloth. Wait until every layer of filler has dried before adding more. Don't proceed with this step until everything is completely dry. Especially if you've had to sand a good amount of the backing down, chances are you've dirtied up the seat in the process. Then, paint over your patch job slowly and gently. As you've already come to expect, you'll have to wait until each layer dries fully before you apply another one.

Check Out Our Review of the Mitsubishi Fuso But we have at least one recommendation. Check out our review of the Mitsubishi Fuso. But if you've never driven a Mitsubishi before, you might not believe that investing in this truck is a good idea. By the time you're finished, you'll feel confident that it's the right truck for you. This is helpful to know, as it'll provide some clarity when you're trying to decide on which option is best for your needs. Especially if you know the specific requirements needed ahead of time. This is a great model for someone that's interested in investing in an electric vehicle. It's quite an innovative model and is one of the only "light trucks" in the world which runs solely on a battery. Especially because there are now some cities that are introducing fines for vehicles which produce a lot of emissions. If you'd like to hear just how quiet this model can be, consider visiting a dealership to find out more. There is also keyless entry. This is one of the more popular models and you'll notice that the company has put a lot of work into making this model very appealing. This makes it a lot easier for drivers to see what's going on around them, especially when compared to other similar trucks in this market. There is also a lot of space and even room for some storage. It will provide alerts whenever the person driving is speeding. Also, the system will provide alerts if it detects there may be a collision of some sort. Drivers don't have to spend time switching gears, which can be a huge problem in the stopstart traffic of a city. They even have the option of choosing between blue and black cloth for the interior of the vehicle. There are many benefits that come with this model. Because it's power output is greater, it means you can carry more items. The high torque output of this vehicle also means that it won't struggle during times of stopstart motion.

This stronger frame means that the vehicle is now more durable, allowing for it to last longer. It's also easy for people to get in and out of the cab because there's a step on the side which can provide help. Like the diesel model, there is the option to adjust the steering wheel. This is especially helpful if you're purchasing these trucks for your business and you need a fleet of them. Using the cloud app, you can track the location of your trucks. You can view data on the driver and how safely they're driving. This is helpful if you're trying to encourage drivers to be more efficient with their fuel usage or you want them to be cautious when driving. But, as mentioned, it's something worth considering if you're going to be in charge of a large number of drivers. But you may be able to develop a custom approach if you want to track other models. The gas model looks as though it has the most benefits. If so, the electric model is definitely worth considering. Only then will you be able to make an informed judgment call on which model is best for you. Check out these tips from a mechanic.
